Darjeeling, West Bengal

Many times at night the temperature goes down, and one has to physically get up from sleep and reduce the fan speed, which is quite irritating. The innovator has come up with an electronic system that will automatically adjust the rotational speed of the room fan according to the room temperature enabling a person to sleep peacefully and comfortably.

Ajooba tube light frame: This is small improvisation to use fused tube lights without choke or starters. NIF has funded the innovator from its MVIF fund for aiding in commercialization of various innovations. Further with the assistance of NIF, technology licenses have been given to entrepreneurs based in Assam, W. Bengal and Rajasthan respectively.
